Shehryar Naeem

Full Stack Engineer

Lahore, Pakistan | shehryarwebdev@gmail.com
Portfolio | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Full-stack engineer with 3 years building distributed, event-driven systems: webhook pipelines that survive provider timeouts, idempotent write-ahead-log processing that prevents double payments over an at-least-once blockchain primitive, and authorization layers hardened against real production defects. Writes maintainable, SOLID-aligned code — single-responsibility service layers, reusable typed abstractions — and owns the frontend integration layer end-to-end, translating designs into pixel-accurate production UI.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript
Backend: Node.js, Express, NestJS, REST APIs, Socket.IO
Databases: PostgreSQL (Prisma), MongoDB, Redis
Architecture: Event-Driven Systems, Distributed Systems, Message Queues
Frontend: React, Next.js, React Native, TanStack Query, Tailwind CSS, Figma-to-Code
AI: LLM Integration, Retrieval-Augmented Generation (RAG) Systems, AI Workflow Automation, Production AI Systems
Infrastructure: Docker (Compose), AWS S3, Git/GitHub, Jest , Playwright, CI/CD Pipelines
Blockchain: Blockchain Integration, Wallet-Based Authentication

PROFESSIONAL EXPERIENCE

Full Stack Developer
2023 - July 2026

Weiblocks
Lahore, Pakistan

- Shipped 8 production systems end-to-end across fintech, AI, and marketplace platforms, owning backend architecture, API design, and the frontend integration layer on each.
- Built event-driven ingestion pipelines that decouple slow downstream work from webhook acknowledgment, eliminating data loss from provider timeouts.
- Designed idempotent, write-ahead-logged transaction processing — conditional atomic updates, signature-derived idempotency keys — that prevents double-payment or lost-payment over an at-least-once blockchain primitive.
- Replaced password-based auth with wallet-signature verification (Ed25519) and role-based access control across multiple trust levels, closing a stored-credential attack surface entirely.

Frontend Developer Intern
2023 - 2 Months

Excellence Code Solution
Lahore, Pakistan

- Built responsive user interfaces and reusable React components for production web applications.
- Collaborated with senior developers to refine layouts, resolve UI issues, and follow production development practices.

KEY PROJECTS

TWQ
Solo-built real-time on-chain token monitoring and alerting platform consolidating 8 external data sources into one automated workflow.

- Cut webhook ingestion volume ~99.8% (~100K -> ~200 events/hr) by narrowing event subscriptions to the 4 programs and 3 event types the product needs.
- Built a shared, self-throttling rate limiter wrapping every outbound call to a given third-party provider so concurrent webhook bursts never exceed that provider's request cap.
- Removed passwords and private keys from the attack surface entirely with single-use, wallet-signature (Ed25519) authentication.

Dibzi
NFC-triggered loyalty platform letting merchants edit live reward tiers customers already hold, at zero blockchain cost per update.

- Made merchant-editable rewards possible on an architecture where metadata is normally permanent, by inverting which half of the token data is fixed.
- Made tier downgrades structurally impossible, not just blocked, so a customer can never lose an already-earned reward.

FinTrust
Non-custodial staking and rewards platform tying token staking to real card benefits, engineered for crash-safe financial operations.

- Closed an entire class of double-pay/lost-payment bugs by construction with a write-ahead-log disbursement engine that self-heals within 5 minutes.
- Ran 3–10 concurrent replicas correctly with zero coordination layer by making every write idempotent by construction.

Flyverr

Staged digital-product resale marketplace with multi-round pricing and Stripe Connect payouts, built from a blank Next.js scaffold.

- Built the auth, access-control, and API-integration foundation that later feature domains — including a teammate's — were built on top of.
- Replaced four independently-drifting Stripe-readiness checks with one reusable gate enforced identically everywhere a purchase or listing happens.

Additional Projects: Lindo Mart (internal operations platform — NestJS, MongoDB, React, Socket.IO; 6 authorization/data-integrity defects found and fixed in inherited code), SocialFi Trading (Solana bonding-curve social platform — NestJS, Anchor/Rust, React Native; 4 Anchor smart contracts), Mindful Oasis (XRPL wellness rewards platform — React, Node.js), and Social Locket (real-estate social marketplace — React, Stripe, PayPal, Web3Modal).

EDUCATION

University of Education, Lahore

Bachelor's Degree - Information Technology
